EXAMINER'S AMENDMENT

5. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Francis J. Maquire (Req. No 31,391) on 12/17/2010.

The amendment follows:

1. (Currently Amended) A method for reconfiguration to be performed in a wireless system utilizing a flexible layer one to transfer data over an air interface, said method comprising transmitting a transport format combination set reconfiguration message to a terminal over a certain basic physical subchannel, said transport format combination set reconfiguration message indicating one transport format combination with a certain

transport format combination identifier exclusively for signalling use and the transport format combination relating to exactly one active transport channel with a predetermined block size and cyclic redundancy check size, the method further comprising

if <u>when</u> the transport format combination set reconfiguration message indicates a change in the size of transport format combination identifiers, checking a parameter value indicating a change of a basic physical subchannel utilized by the terminal and ordered by a network, and

starting to use a new configuration indicated by the transport format combination set reconfiguration message or that indicates the change in the size of transport format combination identifications, otherwise staying with the existing configuration as a result of the checking.

10. (Currently Amended) An apparatus, comprising: at least one processor; and at least one memory including computer program code, the at least one memory and the computer program code configured to, with the at least one processor, cause the apparatus at least to: to transmit a transport format combination set reconfiguration message to be delivered to a second device over a certain basic physical subchannel, said transport format combination set reconfiguration message indicating one transport format combination with a certain transport format combination identifier exclusively for signalling use and the transport format combination relating to exactly one active transport channel with a predetermined block size and cyclic redundancy check size,

check a parameter value indicating a change of a basic physical subchannel utilized by the second device and ordered by the apparatus, if when the transport format combination set reconfiguration message indicates a change in the size of transport format combination identifiers, and start to use a new configuration indicated by the transport format combination set reconfiguration <a href="massage-or-message-that-indicates-the-change-in-the-size-of-transport format-combination-identifications-otherwise-stay-with-the-existing-configuration-as-a-result of the check.

16. (Currently Amended) A method for reconfiguration in a wireless system utilizing a flexible layer one to transfer data over an air interface, said method comprising receiving a transport format combination set reconfiguration message over a certain basic physical subchannel, said transport format combination set reconfiguration message indicating one transport format combination with a certain transport format combination identifier exclusively for signalling use and the transport format combination relating to exactly one active transport channel with a predetermined block size and cyclic redundancy check size, and utilizing a parameter indicating a change of a basic physical subchannel ordered by a network, and the receiving of the transport format combination set reconfiguration message.

if <u>when</u> the transport format combination set reconfiguration message indicates a change in the size of transport format combination identifiers.

Application/Control Number: 10/574,989

Art Unit: 2617

19. (Currently Amended) An apparatus, comprising: at least one processor; and at least one memory including computer program code, the at least one memory and the computer program code configured to, with the at least one processor, cause the apparatus at least to: a data transfer unit configured to receive a transport format combination set reconfiguration message over a certain basic physical subchannel, said transport format combination set reconfiguration message indicating one transport format combination with a certain transport format combination identifier exclusively for signalling use and the transport format combination relating to exactly one active transport channel with a predetermined block size and cyclic redundancy check size, and utilize a parameter indicating a change of a basic physical subchannel ordered by a network, and receipt of the transport format combination set reconfiguration message.

if—when the transport format combination set reconfiguration message indicates a change in the size of transport format combination identifiers.

Reasons for Allowance

- Claims 1, 4-13, 16 and 18-23 are allowed.
- 7. Claims 1, 4-13, 16 and 18-23 are allowed and have been renumbered 1-18, respectively, for printing.
- 8. The following is a statement of reasons for the indication of allowable subject matter:

The present application comprises the following features recited limitations, which the closet prior art Eriksson (US 7,103,020 B2) reference of record and reference

Application/Control Number: 10/574,989

Art Unit: 2617

cited in form PTO-1449 does not teach: Certain TFC, which has been reserved only for determining settings for transmitting or receiving information, and which pertains to one and only active TC having predefined block and CRC sizes. Therefore, Eriksson lacks the feature of "transmitting a transport format combination set reconfiguration message to a terminal over a certain basic physical subchannel, said transport format combination set reconfiguration message indicating one transport format combination with a certain transport format combination identifier exclusively for signaling use and the transport format combination relating to exactly one active transport channel with a predetermined block size and cyclic redundancy check size". Prior art fails to disclose a checking operation concerning a MS/BTS parameter because of a change in a size of TFCIs in a configuration message indicating the certain TFC, which has been reserved only for determining settings for the transmitting or receiving information and which pertains to the single active TC having the predefined block and CRC sizes

According to the above, new Eriksson does not disclose or suggest all features of the method of amended claim 1. The claimed method utilizes one TFC that is selected and reserved exclusively for signaling use, and it may contain only one active transport channel and always utilize the same CRC and the same transport block size in order to unambiguously define the proper settings for signaling information. Therefore claims 1, 4-13. 16 and 18-23 are allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

Art Unit: 2617

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
